SUMMARY

Software Engineer with 4+ years shipping high-throughput production systems at PayPal and Target. Cut fraud-pipeline latency 35% with serverless AWS APIs, accelerated releases 50% through containerized CI/CD, and removed 60% of manual verification work by putting Amazon Bedrock into a live validation path. Owns the full stack: Java/Spring Boot microservices at 1M+ daily transactions, Kafka streams, React/TypeScript frontends, AWS infrastructure. Builds with an AI-native workflow (Claude Code, Codex, Copilot) and ships end to end, design through zero-downtime deploy.

TECHNICAL SKILLS

Languages: Java (8/11/17/21), Python, JavaScript, TypeScript, SQL

Backend & Architecture: Spring Boot, Spring Security, Spring Cloud, Hibernate/JPA, Node.js, Express, RESTful APIs, Microservices, Event-Driven Architecture, Apache Kafka, RabbitMQ, OAuth2/JWT, OWASP Top 10

Frontend: React, Next.js, Redux, React Hooks/Context API, Angular, Tailwind CSS, Bootstrap, HTML5, CSS3

Cloud & Data: AWS (Lambda, API Gateway, ECS, EKS, EC2, S3, Amplify, DynamoDB/DAX, Bedrock), Azure, PostgreSQL, MySQL, SQL Server, MongoDB, DynamoDB, Redis

AI-Native Engineering: Claude Code, OpenAI Codex, GitHub Copilot, Cursor, Anthropic & OpenAI APIs, Amazon Bedrock, LangChain, RAG, Vector Search, Prompt Engineering, MCP, Agentic Workflows, Hugging Face, PyTorch, TensorFlow

DevOps & Quality: Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Git, Maven, JUnit, Mockito, TestNG, Selenium, Postman, Grafana, Prometheus, Splunk, Jira, Agile/Scrum, PCI-DSS & CCPA compliance

PROFESSIONAL EXPERIENCE

Software Developer | PayPal

Aug 2024 – Present

- Re-architected high-volume fraud mitigation pipelines as serverless RESTful APIs on AWS Lambda and API Gateway, cutting transaction-processing latency 35% at peak load
- Engineered distributed Java/Spring Boot microservices on AWS ECS and EC2 that absorb peak financial transaction traffic without degradation, instrumented with Prometheus
- Shipped Amazon Bedrock-powered document validation into the exception-management flow, driving a 60% reduction in manual verification time and moving analysts off repetitive review work
- Hardened banking endpoints with OAuth2 and JWT authentication aligned to OWASP Top 10 guidelines
- Built React/TypeScript components on AWS Amplify and S3, improving UI responsiveness 40% on customer-facing flows
- Automated end-to-end CI/CD with Jenkins and Docker, containerizing core services to eliminate environment drift and accelerate delivery speed 50%
- Adopted an AI-native development loop (Claude Code, Codex, Copilot) for scaffolding, test generation, and refactors, shipping faster while holding review and coverage standards

Java Developer | Target

Jul 2021 – Jul 2023

- Built Target's retail order management platform serving mobile, web, and in-store kiosks with Java/Spring Boot microservices, REST APIs, and Kafka event streaming, processing 1M+ transactions per day
- Developed 20+ RESTful microservices (Spring Boot, Hibernate) powering core retail logic, including a routing engine that connects each customer to the nearest in-stock fulfillment center
- Streamed millions of daily product-availability events via Kafka into real-time inventory webhooks across store, warehouse, and third-party vendor systems, monitored with Splunk and Grafana
- Deployed ML-powered recommendation engines predicting purchase intent and surfacing personalized promotions, plus React associate dashboards that cut manual inventory lookup time and lifted sales
- Optimized PostgreSQL and DynamoDB (with DAX caching) for product catalog metadata and session storage, accelerating read access on high-traffic paths
- Built an Angular/TypeScript analytics dashboard tracing the full order lifecycle, and multi-language UI support (React Hooks, Context API) for global store regions
- Delivered zero-downtime deployments through Jenkins, Docker, and AWS Lambda/API Gateway pipelines; wrote JUnit/Mockito and TestNG suites enforcing PCI-DSS and CCPA compliance

SELECTED PROJECTS

Microservices Banking Platform | [GitHub](https://github.com)

Java, Spring Boot, Spring Cloud, Spring Security

- End-to-end banking system with service registry, API gateway, and independent user, account, fund-transfer, and transaction services; JWT-secured, containerized, and designed for horizontal scale

EDUCATION

Lamar University — M.S. Computer Science (GPA 4.0/4.0) • Outstanding Graduate Student Award

Jan 2024 – May 2025

JNTU Hyderabad — B.Tech Electronics & Communication Engineering (GPA 9.1/10)
